

# ASSET MANAGEMENT & ISO 55000

Transforming Assets into Value — A Strategic Journey to Excellence

## Course Overview

In today's complex infrastructure landscape, organizations must manage assets not just for performance, but for sustained **value creation**. This course introduces the principles, framework, and implementation practices of ISO 55000 and shows how to align technical, financial, and organizational systems for optimal asset lifetime value. A transformative course that makes ISO 55000 implementation clear and achievable.

## Key Topics

- Introduction to Asset Management: scope, value, and terminology
- Understanding the ISO 55000 Series (55000/55001/55002)
- The Asset Management Framework: policy, strategy, objectives, plans
- Lifecycle & Risk-Based Thinking: acquisition, operation, renewal, disposal
- Information, Performance & Decision-Making (KPIs, condition, investment)
- Implementation Journey: Embedding the Model with Leadership support
- The ISO 55000 Assessment and Certification Process

## Methodology

- Delivered by trusted ISO 55000 practitioners with GCC sector experience
- Interactive workshops and group exercises
- Real life case studies from various sectors
- Bilingual English + Arabic for inclusive learning across all levels
